Caenorhabditis elegans
Caenorhabditis elegans
Caenorhabditis elegans
Eukaryota, Metazoa, Nematoda; Chromadorea; Rhabditida; Rhabditidae; Peloderinae; Caenorhabditis.

1 (bases to 460)
Reboul, J., Vaglio, P., Tzellas, N., Thierry-Mieg, N., Moore, T., Jackson, C., Shin-i, T., Kohara, Y., Thierry-Mieg, D., Thierry-Mieg, J., Jackson, C., Shin-i, T., Kohara, Y., Thierry-Mieg, J., Thierry-Mieg, J., Brasch, M.A., Vandenhaute, J., Lamesch, P.E., Hill, D.E. and Vidal, M. Open-reading-frame sequence tags (OSTS) support the existence of at least 17,300 genes in C. elegans
Mat. Genet. 27 (3), 332-336 (2001)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      OSTF042E6 1 AD-wrmcDNA Caenorhabditis elegans cDNA similar to B1174361
OSTFO61F9 1 AD-wrmcDNA Caenorhabditis elegans cDNA similar to C45G7.2, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Email: Jerome Reboul@dfci.harvard.edu
Sequence tag Of Gateway entry clones. The primers used were
designed on the predicted protein encoding ORF. C. elegans ORFeome

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 43,

Sequence 10, Application US/09005476

Patent No. 617181

GENERAL INFORMATION:

APPLICANT: Hartley, James L.

APPLICANT: Harsch, Michael A.

TITLE OF INVENTION: Recombinational Cloning Using Engineered

TITLE OF INVENTION: Recombination Sites

NUMBER OF SEQUENCES: 35
RESULT 19
US-09-233-493-10
US-09-233-493-10

Sequence 10, Application US/09233493

Patent No. 6143557

GENERAL INFORMATION:
APPLICANT: Hartley, James L.
APPLICANT: Brasch, Michael A.

TITLE OF INVENTION: Recombination Sites

IITLE OF INVENTION: Recombination Sites

Sequence 9, Application US/09233493
; Sequence 9, Application US/09233493
; Patent No. 6143557
; GENERAL INFORMATION:
    APPLICANT: Hartley, James L.
    APPLICANT: Brasch, Michael A.
    TITLE OF INVENTION: Recombinational Cloning Using Engineered TITLE OF INVENTION: Recombination Sites
    TITLE OF INVENTION: Recombination Sites
    TORRESPONDENCE ADDRESS:
    ADDRESSEE: STERNE, KESSIER, GOLDSTEIN & FOX, P.L.L.C STREET: 1100 New York Ave., N. W. Suite 600
    CITY: Mashington
    STATE: DC
APPLICANT: Gaithersburg, MD 20884-9980
APPLICANT: United States of America
APPLICANT: Brasch, Michael A.
TITLE OF INVENTION: Recombinational Cloning Using Engineered
NUMBER OF EQUENCES: 31
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score 22; DB 5; Length 25;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description

Patent No. 6277608

Patent No. 6277608

GENERAL INFORMATION:
APPLICANT: Hartley, James L.
APPLICANT: Transle, Gary F.
APPLICANT: Fox, Donna K.
TITLE OF INVENTION: Recombinational Cloning Using Nucleic Acids Having TITLE OF INVENTION: Recombination Sites
FILE REFERENCE: 0942.285007

CURRENT APPLICATION UNDERS: US/09/296,280

CURRENT FILING DATE: 1999-04-22
